March 1, 2018

Dear Business Owner:

The Village of Waverly is currently constructing a new Wastewater Treatment Plant in the foot print of the original plant which results in challenges. One challenge we are facing is FOG (fats, oil and grease) in amounts that are at or above the mandated limits. Removal of FOG increases the operations cost to the Village, which in turn increases the charges to our customers.

**We need your help.** Please take every effort possible to eliminate discharging FOG into the sewer system. Please be sure no fats are put directly into the system. Please ensure that your current grease trap is working properly and cleaned on a regular basis with all fats being disposed of according to regulations.

Your cooperation is greatly appreciated as we continue with this year of construction.

Thank you,  
Board of Sewer Commissioners
